

SPINAL CORD INJURY RESEARCH PROGRAM

CDMRP
DEPARTMENT OF DEFENSE
CONGRESSIONALLY DIRECTED
MEDICAL RESEARCH PROGRAMS

MISSION: To fund research and encourage multidisciplinary collaborations for the development and translation of more effective strategies to improve the health and well-being of Service Members, Veterans and other individuals with spinal cord injury

Congressional Appropriations

FY09-FY24:

\$477.85M total

“My involvement...helped me to realize that there are really people and programs existing that are actively awaiting real-life input

regarding mental and physical disabilities so that advancements can be made to better the quality of life of individuals facing those issues.”

Sean Ferry, SCIRP Peer Reviewer, Research Participant, and FY19 Award Consumer Advocate

SCOPE OF THE PROBLEM¹

In the U.S. there are...

~300k

people living with spinal cord injury

~17k

new cases per year

New cases nearly every

~30 minutes

RELEVANCE TO MILITARY HEALTH

The rate of spinal cord injuries within the military was **8-10X** that of the civilian population at the height of conflicts in Iraq and Afghanistan²

Roughly **20%** of all people in the U.S. with spinal cord injuries are Veterans³

The VA is the **largest single provider** for spinal cord injury care in the U.S.³

PROGRAM PRIORITIES

- Preserving and protecting spinal cord tissue following **acute injury**
- **Biomarkers** for diagnosis and prognosis, and for evaluation of treatment efficacies
- Promising interventions to address **secondary health effects** across the life span in people with spinal cord injury
- **Psychosocial issues** relevant to people with spinal cord injury, their families and/or their care-partners across the life span
- **Rehabilitation and regeneration** to improve function after spinal cord injury

PROGRAM IMPACT AND OUTCOMES

ACUTE INJURY

4-aminopyridine

A drug that promotes extensive and durable functional recovery after SCI and traumatic brain injury

Accurate Imaging of the Spinal Cord

Multispectral imaging reduces signal disruption near metal implants during MRI

BIOMARKERS

PiPChip

A home monitoring system for pressure injury risk

SECONDARY HEALTH EFFECTS

Immersive Virtual Walking

A non-opioid pain management therapy optimized for in-home use

PSYCHOSOCIAL ISSUES

iManage SCI

A symptom-monitoring and self-management tool to facilitate mental wellness

REHABILITATION AND REGENERATION

MyndMove™

A noninvasive neuromodulation device for improved upper extremity function

Stentrode™

Brain-computer interface technology to restore independent function and limb control

Supporting Community Collaborations for Impactful Research Outcomes

Capturing and integrating the unique perspectives of people living with spinal cord injury into research

- The SCIRP requires research teams to use equitable collaborations and partnerships with members of the lived experience community.
- Engaging community partners during the planning and implementation of research projects enhances the potential impact for people living with spinal cord injury.

SCIRP-funded research incorporating user experiences resulted in recommendations for exoskeleton use based on:

- Psychological benefits, including being eye-level with non-disabled friends and family, and improvements in bowel/bladder function and pain management
- Participant-reported drawbacks, such as safety concerns, fatigue, muscle spasms, device size and inaccessibility for the average user
