

Employing Community Collaborations

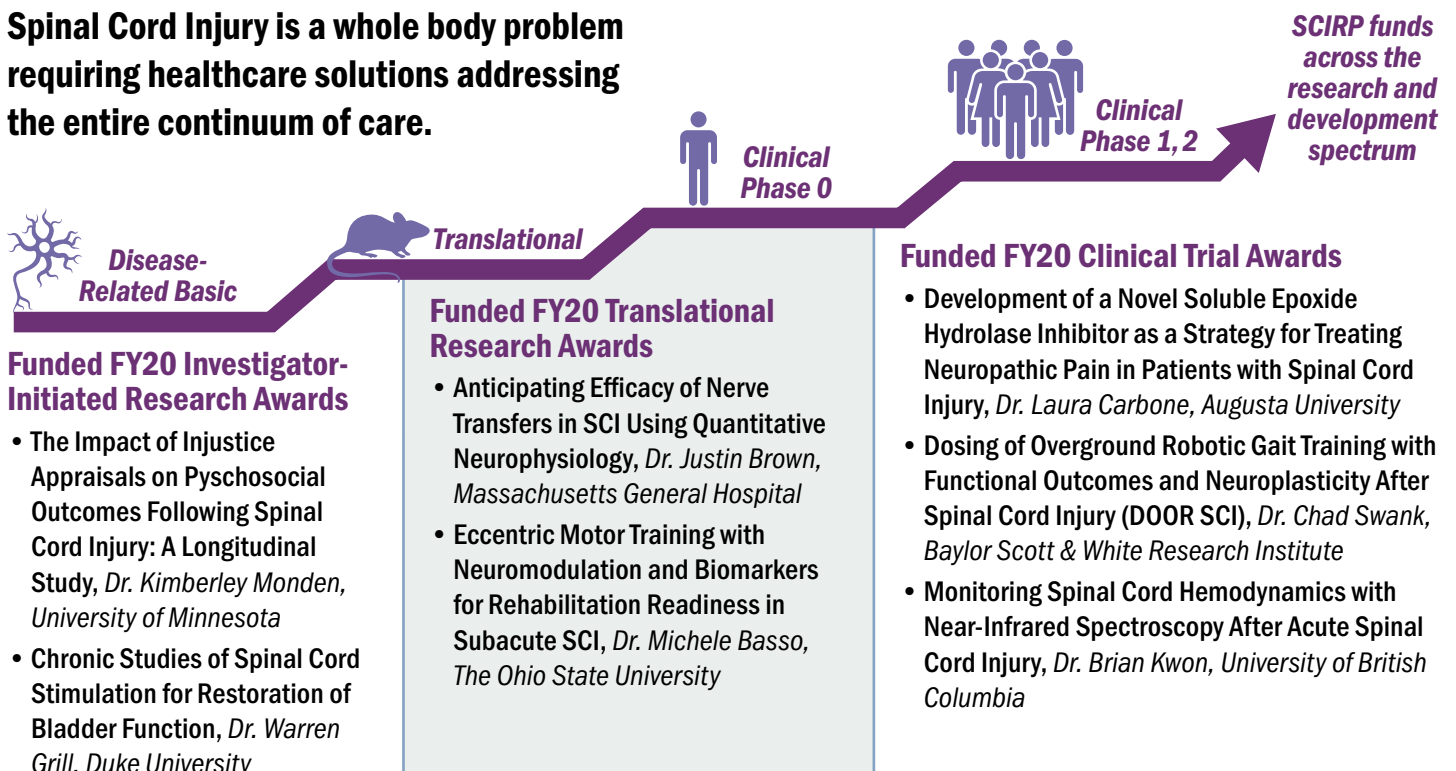

The Spinal Cord Injury Research Program (SCIRP) believes that capturing and integrating the unique perspectives of people living with SCI, through collaborative research approaches, will enable better and more impactful research outcomes. Research teams are therefore required to establish and utilize effective and equitable collaborations and partnerships with community members to maximize the translational and impact potential of the proposed research. Collaborative research approaches may include Lived Experience Consultants, partnership with community-based organizations, or establishment of Community Advisory Boards, which will provide advice and consultation throughout the planning and implementation of research projects.

❖ Community Partner(s) are named at the time of pre-application submission.

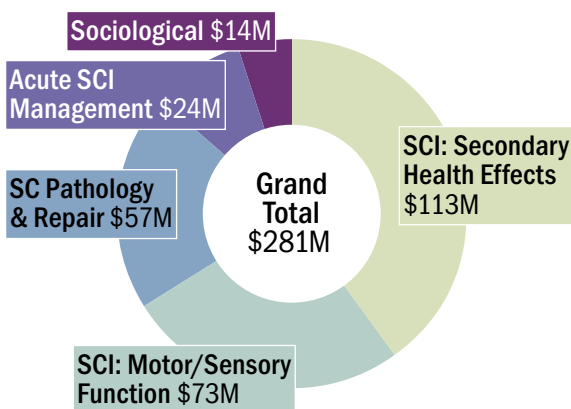

❖ A Collaborative Research Plan is submitted with the full application.

❖ IIRA applications are exempt from this requirement.

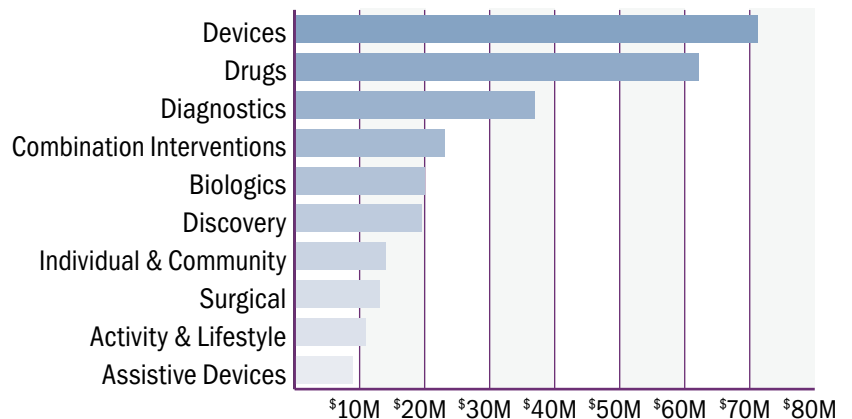

Spinal Cord Injury is a whole body problem requiring healthcare solutions addressing the entire continuum of care.
